$|\Delta y|$

The figure consists of two vertically stacked panels sharing a common x-axis representing the absolute rapidity difference  $|\Delta y|$  from 0 to 6. The top panel shows the 'Gap fraction' on the y-axis (0 to 2). It displays ATLAS data points (black squares) with error bars, and two Monte Carlo model predictions: Herwig 7.2.0 default (green dashed line with open squares) and Sherpa 2.1.0 default (red dotted line with filled diamonds). The gap fraction generally decreases as  $|\Delta y|$  increases, starting around 1.0 and ending near 0.3. The bottom panel shows the 'Ratio to ATLAS' on the y-axis (0.5 to 2). It displays the same data and model points, but the models are overlaid with shaded regions (green for Herwig, yellow for Sherpa) representing uncertainty bands. A horizontal line is drawn at a ratio of 1.0. The ratio to ATLAS is mostly close to 1.0, with some deviations at larger  $|\Delta y|$ .
