Ratio to CMS

Figure 1 consists of two panels. The top panel shows the pT distribution for the 2011-2012 data set (black squares) and the 2011-2012 data set (black squares) compared to the 2011-2012 data set (black squares). The bottom panel shows the ratio of the 2011-2012 data set to the 2011-2012 data set, with a green shaded band representing the 1-sigma uncertainty and a yellow shaded band representing the 2-sigma uncertainty. The x-axis is pTD2, ranging from 0 to 1. The y-axis for the top panel is dN/dpT, ranging from 0 to 3000. The y-axis for the bottom panel is Ratio to CMS, ranging from 0.5 to 2.0.
